DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cooper (364).

Cooper (364) discloses applicants' basic invention namely a portable hand-held UVA light source for inspection of leakage from a refrigerator system (col.1, second-third paragraph) comprising: a UVA light source for irradiating a fluorescent material which emits a different wavelength other than the UVA light (315-400 nm); a housing for holding at least one UVA lamp (18) including a reflector (22) with dichroic filtering

Art Unit: 2881

means (col.3, third paragraph), an additional UV outlet filter (26) (col.4, line 33), and a cylindrical handle means (38) (Figure 2).

According to page 4 of applicants' specification, applicants utilize a low-voltage battery that can be 12v or under, to power applicants' lamp. As seen in Figure 7 of Cooper, it would appear that Cooper's device could also be powered from an automobile battery (12v), since a connection to lighter outlet therein is disclosed. Therefore, it is obvious to one of ordinary skill in the art that Cooper is disclosing a portable, hand-held, compact, high intensity, UVA inspection lamp that can be powered from a low voltage source such as a battery from an automobile.

Furthermore, it is obvious to anyone of ordinary skill in the art at the time the invention was made that said at least one UVA lamp could have been well known off the shelf diode emitting means; if so desired.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cabrera (col.3), Scaringe, and Garcia have been cited to show other similar devices.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2881

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
